

Project CALLS Report

Creating Alternatives to Limiting and Lacking Services

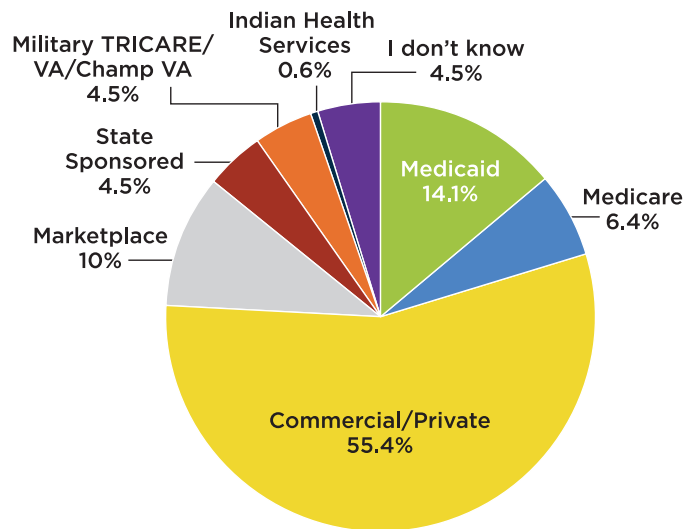

In August 2015, Hemophilia Federation of America (HFA) created Project CALLS to collect data and personal stories about how changes in insurance company policies are impacting the care of people with bleeding disorders. The data collected over the past three years offers a baseline view of the types of insurance issues encountered by the bleeding disorders community. Overall, participants have reported more issues in access to product vs. access to services. Most telling is the fact that over half of CALLS participants report delaying care as a result of insurance obstacles. This is highly concerning as delayed care or treatment is likely to result in negative health outcomes for patients with bleeding disorders. With increasing numbers of payers looking to manage the class of hemophilia treatments, HFA has been able to cite CALLS data as we advocate for vital patient safeguards: step therapy protections, standardized prior authorization processes, and more.

HFA launched an updated, shortened version of Project CALLS in January 2019, designed to be a more accessible option for reporting health insurance issues. With the introduction of the shortened questionnaire, HFA expects to increase the number of CALLS participants. Respondents will also have the option to answer additional questions from the current, longer form in order for HFA to better

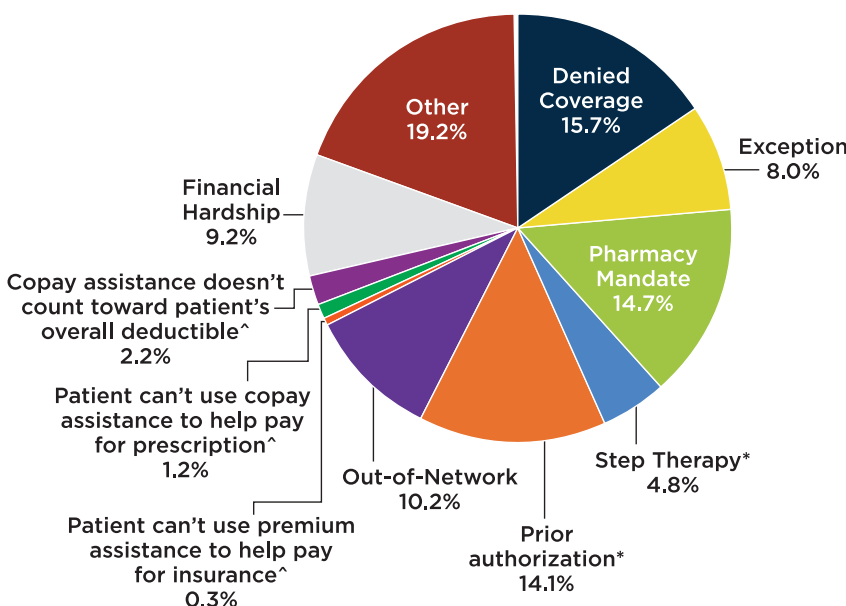

understand the issue reported and how it was resolved. HFA will continue to collect and share information included in this quarterly report from both the long- and short- form surveys.

More than 200 members of the bleeding disorders community have completed Project CALLS.
